

This thesis revealed that the dataset is predominantly used for performance-oriented analyses, particularly in the domains of player evaluation, tactical analysis and outcome prediction, while social and economic perspectives remain underrepresented. Methodologically, machine learning dominates in these performance-related areas, whereas classical statistical methods are more common in studies, which are classified into social and economic theories. These trends reflect a general tendency in sports analytics to prioritize predictive modeling over explanatory context modeling, what is viewed rather critically by \textcite{davis2024methodology}. kannst du grammatikalisch korrigieren und flüssiger machen aber behalte die struktur

Hier ist dein Text in korrigierter und flüssigerer Form, bei gleichbleibender Struktur:

Möchtest du, dass ich den Ton eher **wissenschaftlich-nüchtern** oder etwas **leserfreundlicher** (z. B. mit leichteren Satzkonstruktionen) gestalte?

The underrepresentation of such perspectives may be due to their lower immediate applicability in match preparation or player scouting. However, neglecting these dimensions limits the potential to contextualize

performance data and to uncover patterns that are not directly visible through purely technical analysis. kannst du grammatikalisch korrigieren und flüssiger machen aber behalte die struktur

Hier eine korrigierte und flüssigere Version deines Textes mit beibehaltener Struktur:

---

However, neglecting these dimensions limits the potential to contextualize performance data and to reveal patterns that are not directly discernible through purely technical analysis.

---

Möchtest du, dass ich dir für solche Passagen gleich **mehrere Varianten** vorschlage (z. B. formal vs. lesefreundlich), damit du flexibel wählen kannst?

A similar imbalance can be observed in the category of visualization and explainability. Although these aspects are crucial for translating analytical results into actionable insights for practitioners, they are rarely the main focus of studies using the dataset. This category often includes studies that aim to develop applications to enhance practical usability and decision-making \parencite{cao2022team, oppermann2021timeelide, krishnamurthy2021dynamic}. The research-practice gap is a common problem in the sport scientific research \parencite{mclean2021systems}. Interestingly, the use of open-source datasets does not necessarily narrow this gap. kannst du grammatikalisch korrigieren und flüssiger machen aber behalte die struktur

Hier eine überarbeitete, grammatikalisch korrekte und flüssigere Version deines Textes mit beibehaltener Struktur:

Soll ich dir zusätzlich noch eine **leicht gestraffte Variante** machen, die etwas eleganter für eine Thesis klingt?
