For example, the wordclouds never explicitly linked to the retrieval or identification of talents. This suggests a thematic gap. Yet, it is important to note that the dataset mostly contains data from professional athletes, which may limit its direct applicability for identifying new or emerging talents. Nevertheless, future research could focus on the analysis of young players making their professional debut.Additionally, combining the dataset with external sources that include youth or lower-tier competitions could open up new avenues for investigating early indicators of talent. kannst du das grammatikalisch korrigieren und flüssiger machen. behalte bitte aber die struktur

Gerne! Hier ist dein Text grammatikalisch korrigiert und etwas flüssiger formuliert, bei Beibehaltung der Struktur:

For example, the word clouds never explicitly referred to the retrieval or identification of talents. This suggests a thematic gap. However, it is important to note that the dataset primarily contains data from professional athletes, which may limit its direct applicability for identifying new or emerging talents. Nevertheless, future research could focus on analyzing young players making their professional debut. Additionally, combining the dataset with external sources that include youth or lower-tier competitions could open up new avenues for investigating early indicators of talent.

Möchtest du, dass ich den Stil etwas akademischer klinge lasse (z. B. durch mehr Nominalstil oder präzisere Verknüpfungen), oder soll es eher bei dieser lesefreundlichen Version bleiben?

As previously mentioned, the lack of studies addressing visualization and explainability contributes to the persistent research-practice gap in sports science. This issue becomes even more apparent when considering the relatively low number of publications within journals

categorized under Sports Science. While a considerable portion of the studies fall within the field of Computer Science and demonstrate strong technical and methodological sophistication, many of them lack a clear connection to applied sports science context. As a result, there is a growing need for more interdisciplinary approaches that not only develop innovative analytical techniques but also translate them into practical value for coaches, athletes and practitioners. While practical open-source tools like Team-Builder \parencite{cao2023team}, SoccerMetrics \parencite{krishnamurthy2021dynamic} and Time Elide \parencite{oppermann2021timeelide} provide valuable support for applied use, they are not sufficient on their own. There is a growing need for more scientific publications that focus on practical implementations. bitte grammatikalisch korrigieren und flüssiger machen aber struktur beibehalten

Alles klar – hier ist dein Text grammatikalisch überarbeitet und stilistisch etwas flüssiger, aber mit unveränderter Struktur:

As previously mentioned, the lack of studies addressing visualization and explainability contributes to the persistent research–practice gap in sports science. This issue becomes even more apparent when considering the relatively low number of publications in journals categorized under Sports Science. While a considerable portion of the studies fall within the field of Computer Science and demonstrate strong technical and methodological sophistication, many of them lack a clear connection to an applied sports science context. As a result, there is a growing need for more interdisciplinary approaches that not only develop innovative analytical techniques but also translate them into practical value for coaches, athletes, and practitioners. Practical open-source tools such as Team-Builder \parencite{cao2023team}, SoccerMetrics \parencite{krishnamurthy2021dynamic}, and Time Elide \parencite{oppermann2021timeelide} provide valuable support for applied use, but they are not sufficient on their own.
